

How to create, download, manage and enjoy your own free e-library

W/ Roger Bullis

**Professor Emeritus of Mass
Communication and Digital Media
Studies at UWSP**

FYI

This .pdf file should be able to be read in all browsers but....

- 1. [Firefox](#) works better for opening links with an easy way to go back and forth with the arrow keys**
- 2. And I used [Duck.ai](#) for the web search page links for safety reasons (and adding a “with links” statement to get the footnotes with each search).**
- 3. And if you are watching the video of this you can freeze the video at this point and download the pdf file at:**
